## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mark A. Litman (Reg.NO. 26,390), on March 20, 2008, to cancel claims 15-20. During the discussion about a restriction requirement of the claimed invention of (group I, claims 1-14), and (Group II, claims 15-20), Mr. Litman, elected (Group I, i.e., claims 1-14) without traverse.

Therefore, the elected claims 1-14, are allowed for the reasons given below.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:  
Claims 1-14, are allowed for the reason the prior art searched and of record neither anticipates nor suggests a method for measuring linear spot velocity or

Art Unit: 2625

spot position variations in a scanning system comprising: providing at least two radiation detectors that can move in tandem across a scan line, the two radiation detectors being spaced apart by a distance  $d$  positioning the at least two radiation detectors at a first point on the scan line; scanning the at least two radiation detectors with scanning radiation and recording the position of the two detectors along the scan line and the time taken for the scanning radiation to scan from a first of the at least two radiation detectors to a second of the at least two radiation detectors while the at least two radiation detectors are positioned at the first point; moving the at least two radiation detectors to a second point on the scan line maintaining the distance  $d$  between the at least two radiation detectors; and again scanning the at least two radiation detectors with scanning radiation and recording the position of the two detectors along the scan line and the time taken for the scanning radiation to scan from a first of the at least two radiation detectors to a second of the at least two radiation detectors while the at least two radiation detectors are positioned at the second point.

The above indicated claimed invention is believed to be distinct from the reference used in the last Office action and the prior arts searched. Taniguchi reference is different from being able to determine the speed or position of a dot at any time during the actual scanning of image so that the final image data may be reviewed and a real correction of the data performed on the basis of the recorded velocity and position on spots during the actual recording process.

Therefore, claims 1 through 14 are allowed for the reasons given above.

***Conclusion***

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to NEGUSSIE WORKU whose telephone number is (571)272-7472. The examiner can normally be reached on 9A-6PM.
